PROJECTS

LegalSeg - *React.js, Node.js, Express, MongoDB, NLP* Apr 2026 – Jul 2026

Segments and classifies legal documents using transformer-based NLP. GitHub | Live Demo

- Built an async transformer inference pipeline for legal document classification (~15–20s/doc).
- Built Node.js/Express REST APIs with JWT auth, error handling and MongoDB storage.
- Built a React UI with role-based sentence rendering; non-ML endpoints respond in <1s.

SceneSolver - *React, FastAPI, MongoDB, ViT, YOLOv8* Feb 2025 – May 2025

Forensic tool that classifies crime scene evidence with a multi-model AI pipeline. GitHub | Live Demo

- Built a Vision Transformer + YOLOv8 workflow for evidence classification (~1s response).
- Built a FastAPI backend with auth, image upload and MongoDB result persistence.
- Built a React UI for evidence upload and real-time prediction display.

Support Ticket System - *Django, PostgreSQL, React, Docker, Gemini API* Aug 2025 – Sep 2025

Full-stack help desk with LLM-based ticket classification and an analytics dashboard. GitHub

- Built a Gemini API classification agent with fallback logic for ticket routing and triage.
- Built Django REST APIs for ticket CRUD and a PostgreSQL analytics layer (total, open, avg/day).
- Dockerized the backend and database for portable deployment.
